CineLink: industry review

A film-financing prototype and a separate audience-engagement quiz

An honest review, not an endorsement request

Two public builds, two different purposes. This pack separates what works today from the business we hope to build.

Please challenge the usefulness, scoring, language, cultural fit and commercial assumptions.

8 pages. About 10 to 15 minutes. No real project, script or investor details are needed.

Tom Ugbodaga, Managing Director, BETONIQWEST LTD

The problem and the two possible customers

These are hypotheses for you to test, not established market findings

Production-side hypothesis

A producer needs a clearer way to organise a project, show its readiness and identify finance routes worth checking.

The intended customer is a producer, writer or production company. A score cannot replace industry judgment or due diligence.

Audience-side hypothesis

A fan wants a quick, enjoyable Nollywood-themed experience they can share.

The separate quiz is an audience-engagement experiment. Quiz completions do not establish demand for production finance.

What is available today

The funding demo and the fan quiz must not be confused

Funding demonstration

Seven inputs: project title, format, genre, USD budget, intended market, team tier and script stage.

A deterministic score and suggested finance models. Named source lists are hard-coded by intended market.

A narrated walkthrough and local browser history are included. No financier is contacted.

Separate fan quiz

Four questions, six fictional character archetypes and a downloadable personalised poster.

An alias can appear on the poster. Sharing buttons open WhatsApp or X. No account is required.

A third-party counter tracks completion events, not independently verified unique users or revenue.

How the current scoring rules work

An inspectable calculation, not a validated credit or investment score

Four components, total 100

Script: 8 / 16 / 24 / 30 points for concept / treatment / full draft / polished stage.

Team: 5 / 12 / 20 / 25 points for first-time / some credits / award-winning / veteran.

Budget: 25 / 15 / 5 points against a fixed ceiling for that team tier.

Market: 6 / 11 / 16 / 20 points; selected genres add 2, capped at 20.

What the calculation does not establish

Inputs are self-reported. The tool does not read a script, verify credits or inspect an itemised budget.

The intended market is not evidence of distribution. Rights, permissions and contracts are not checked.

Labels at 35, 55 and 75 points are prototype thresholds, not evidence of financier approval.

The claims that need correction or validation

Please treat the older demo and pitch wording critically

Finance and enterprise claims

A named funder appearing in a list is not a partner, an open call or proof of applicant eligibility.

Country, ownership, genre, deadlines, tax rules and application conditions are not checked by the matcher.

The demo advertises certification, warm introductions and studio services. Their delivery is not evidenced by this build.

Commercial assumptions and missing safeguards

Older material shows $49/month and a 4% success fee. These are proposed prices, not proven demand or collected revenue.

No funded deals, verified financier network or live commercial traction is established by this review.

Success fees, investment intermediation, rights protection and relevant legal requirements need separate professional review.

What we want you to test as a practitioner

Use invented information only; do not upload a confidential script

Production and commercial usefulness

Does this ask the questions a producer or financier actually needs? What important evidence is missing?

Could the weights reward unsupported claims or encourage a producer to lower a budget just to raise a score?

Which finance routes make sense locally? What checks must happen before a route is suggested?

Would anybody pay for this? Which service would justify a fee, and what should remain free?

Audience experience and privacy

Is the quiz enjoyable, culturally appropriate and worth sharing? Are any character stereotypes insensitive?

Could it attract useful audience engagement, or is it unrelated to the core finance problem?

Project history is kept in browser storage. Do not treat it as a secure rights or confidential-project repository.

Proposed next version, not yet implemented

This is a design discussion for you to correct

Production-side changes to review

Ask country, rights ownership, budget evidence, finance already secured and realistic distribution evidence first.

Separate self-report from verified documents and use transparent explanations rather than approval-sounding labels.

Add an eligibility and source-update process before suggesting specific funds or incentives.

Audience-side changes to review

Review the quiz wording and illustrations with practitioners and fans.

Test accessibility, phones, poster downloads and consent around sharing an alias.

Measure quiz completion events separately from unique users, producer registrations and actual financing results.

Your feedback: what should change first?

A message, voice note or marked-up copy is enough

Five practical questions

1. Is the production-finance problem described correctly, or are we solving the wrong problem?
2. What would make the scoring misleading or commercially unusable?
3. Which three questions or checks would you add first?
4. Is the fan quiz useful, inappropriate, or separate from the finance product?
5. What is the smallest credible pilot, and what would count as a useful result?
